

### Scotts Weed and Feed Study 2008

*Matt Klingenberg and Nick Christians, Iowa State University*

The objective of this experiment was to compare different formulations of Weed and Feed products for control of dandelion and clover and to observe grass response in Kentucky bluegrass turf. This trial was located at the Iowa State University research station near east of Gilbert, Iowa. Final data and a report concerning broadleaf weeds has already been sent to Scotts.

Another interesting observation was made on August 14, 2008. It appears that treatment 10 S13637 which contains the preemergence crabgrass herbicide, dithiopyr, did an outstanding job of controlling crabgrass this summer. The plots that were treated with S13637 had a crabgrass percentage of 2 (Table 1). This is much lower than all of the other products that were tested.

Treatment	Formulation	Crabgrass %
1	MG07-047-A	88
2	MG07-051-A	85
3	MG07-051-B	82
4	MG07-051-C	83
5	MG08-085-B	86
6	MG08-085-A	97
7	MG08-078-A	93
8	MG08-080-A	86
9	S13074	84
10	S13637	2
11	S13599	88
12	S13592	88
13	S13591	90
14	S07201	95
15	Trimec	97
16	Control	91
